April 1 - Lunch Lab 2025

## Trump given 'equal time' on NBC via ads after Harris SNL appearance

- NBC aired Donald Trump ads on its network on Sunday
- Network was criticized for hosting Harris on SNL on Saturday
- FCC commissioner: "Clear and blatant effort to evade Equal Time rule"

ZEBULON, GEORGIA – OCTOBER 23: Republican presidential nominee, former U.S. President Donald Trump looks on during a roundtable with faith leaders at Christ Chapel on October 23, 2024 in Zebulon, Georgia. Trump is campaigning across Georgia today as he and Democratic presidential nominee, U.S. Vice President Kamala Harris attempt to win over swing state voters. (Photo by Anna Moneymaker/Getty Images)

Brendan Carr  
@BrendanCarrFCC

This is a clear and blatant effort to evade the FCC's Equal Time rule.

\***Equal-time rule** mandates radio and television broadcast stations must provide equivalent access to competing political candidates

# Introduction

Democracy relies on the principle of *fair competition* between political candidates

## Campaign rules aimed to level the field:

-  *Equal-time rule*  (US)
-  *Equal airtime law*  (France)
-  Campaign finance laws regulate spending to prevent undue influence

Advent of social media disrupts traditional campaigns and challenge regulations

Crowdtangle

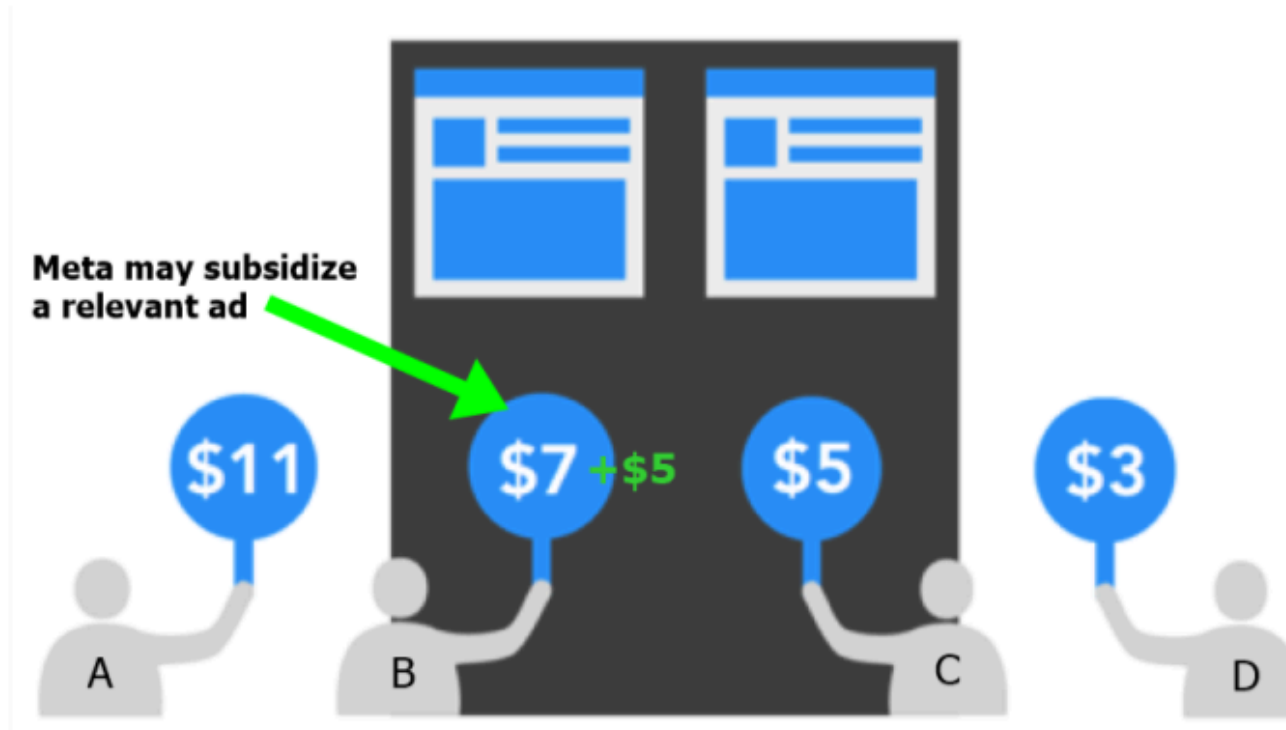

**Ad auctions** = an auction takes place that determines which ad by whom is shown

**Ad auctions** = an auction takes place that determines which ad by whom is shown

# Evidence of Skewed Delivery

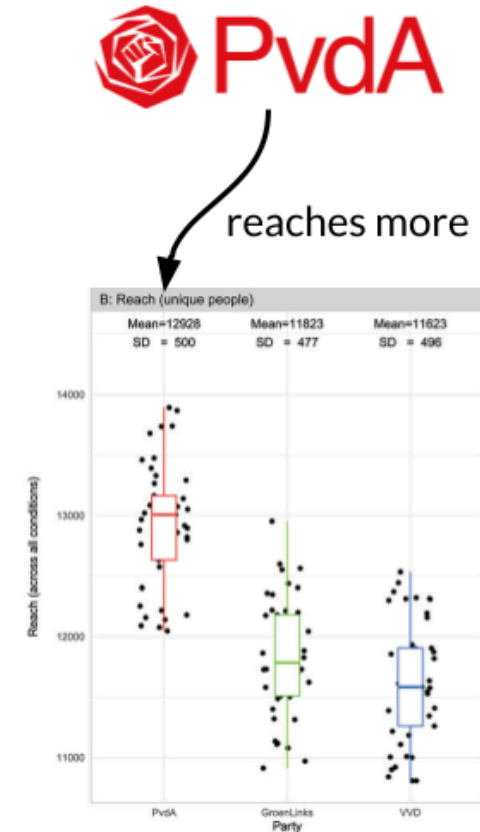

When targeting the same audience, at the same time, with the same budget:

- Ad delivery is heavily skewed along gendered and racial stereotypes
  - even without the intent of the advertiser (Ali et al., 2020)

Regarding political ads (Ali et al., 2021):

- **Skewed delivery**
  - Political ads more often delivered to ideologically congruent audience
    - Bernie ads → higher % D;
    - Trump ads → higher % R
- **Increased cost**
  - Liberal ad to a liberal audience: *21 Dollar per 1000 users*;
  - Conservative ad delivered to liberal audience: *40 Dollar per 1000 users*.

# Evidence of Uneven Playing Field

A close-up shot of Leonardo DiCaprio from the movie Inception. He is wearing a dark suit, white shirt, and dark tie. He has a serious expression and is looking slightly to his right. The lighting is warm and dramatic, with strong highlights and shadows. In the background, another person's head and shoulder are visible, also in profile, looking in the same direction. The overall mood is intense and mysterious.

**WE NEED TO GO**

**DEEPER**

# Research Aim

- 🎯 In this study, we explore the **pricing of political advertisements** on Facebook
- 🌐 Examining **cross-country** and **party** differences during the 2024 European Parliament Elections

**RQ1:** Do prices for political ads differ across *countries* and *parties*?

**RQ2:** What factors influence the price of political advertisements *between* parties?

# Pre-Registered Hypotheses

**RQ1:** Do prices for political ads differ across *countries* and *parties*?

 **H1:** The price for political advertisements differs across countries.

 **H2:** Political parties are charged different prices for the same political ads.

# Exploratory Analysis

**RQ2:** What factors influence the price of political advertisements *between* parties?

## **Account Factors**

Characteristics of the Facebook accounts placing ads  
e.g. follower count & past ad spending

## **Party Factors**

Characteristics of the party placing ads  
e.g. support level & voter demographics

## **Market Factors**

Characteristics of the market environment in which ads are placed  
e.g. audience demand & advertiser competition

# Design

Prominent Account \*Algorithm Audit Study\* (PAAAS)

35 parties in 8 countries placed **identical ads with the same settings**

Germany, Denmark, Austria, Belgium, Sweden, Ireland, Hungary, Netherlands

30 parties in 8 countries placed identical ads with the same settings **at the same time**

Germany, Denmark, Austria, Belgium, Sweden, Ireland, Hungary, Netherlands

### Budget & Timing

- €1/day for 7 days
-  Start Date: April 29, 2024
-  Outcome Measured: Cost per 1k users
- 5 ads X 3 audiences X 30 parties = 450 ads

### Targeting Conditions

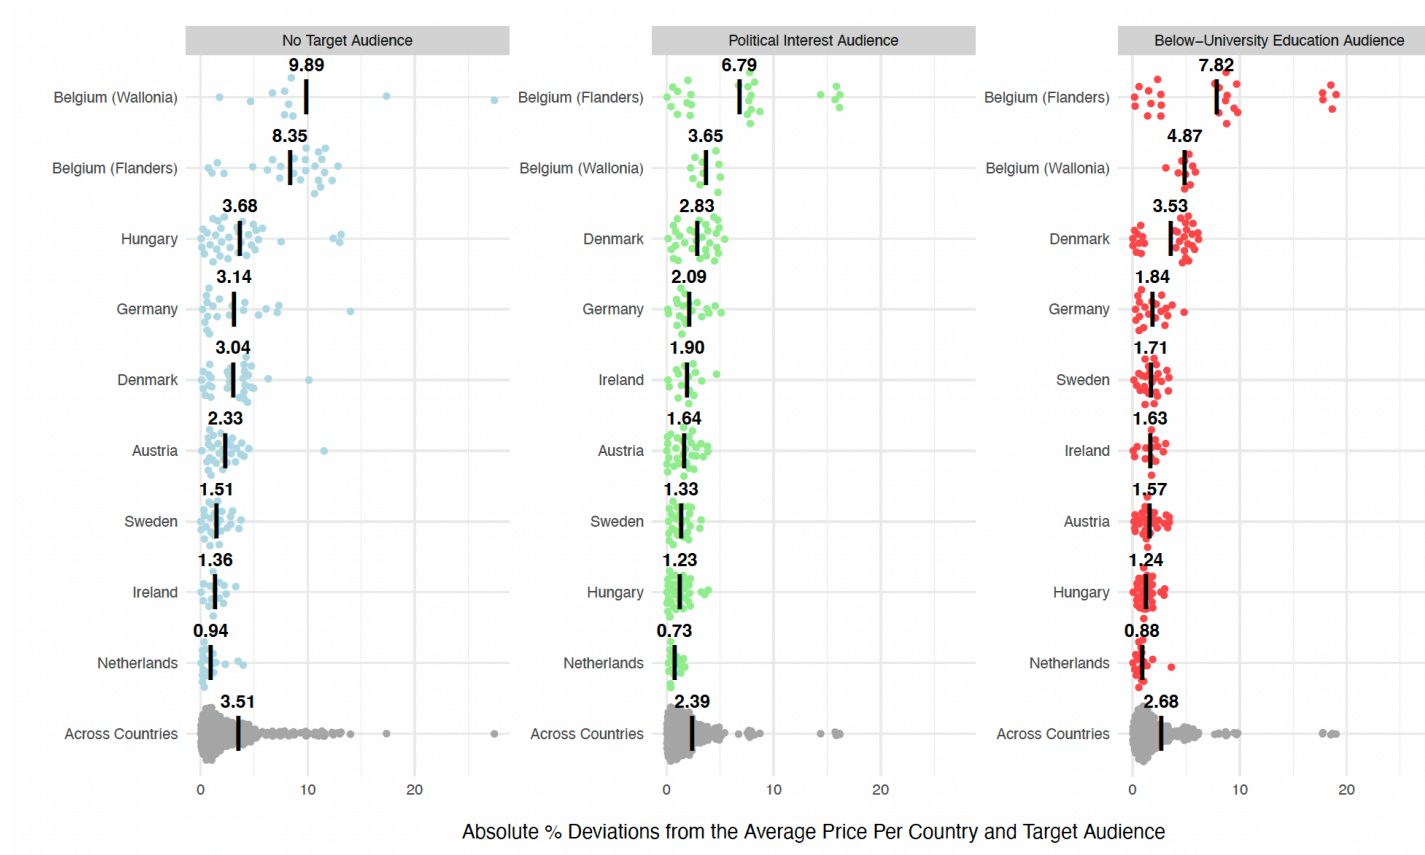

-  No Targeting
-  Interested in Politics
-  Below-University Education

## Do prices differ between countries? (RQ1)

- **High variance across countries** (49% on average, 321% max.)

## Do prices differ between parties? (RQ1)

- **Within-country differences:**

- 4% average variation (max. 27%)
- Even "small" differences can lead to thousands of additional unique people reached

## Do prices differ between parties? (RQ1) - Demographic differences

- **Explore Data yourself!**
  - [euroalgos.shinyapps.io/explore/](https://euroalgos.shinyapps.io/explore/)

# What Drives Price Differences? (RQ2) - Account-Level

Figure 7: Comparison of Political Ad Spending over Different Time Periods

Takeaway: Pages with more historic ad spend have higher prices

# What Drives Price Differences? (RQ2) - Party-Level

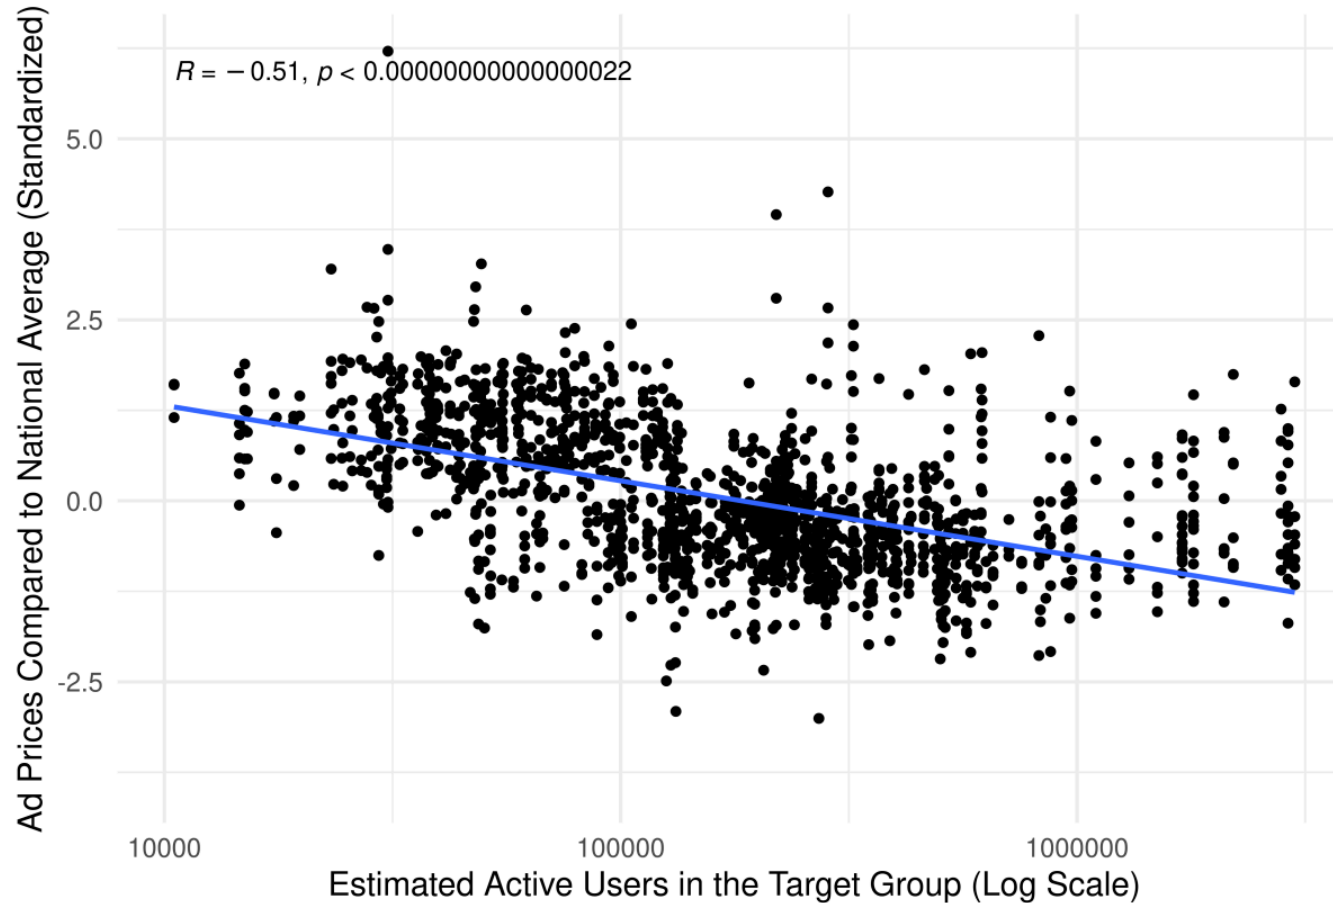

# What Drives Price Differences? (RQ2) - Market-Level

Figure 10: Active User Base by Age, Gender, and Target Audience

Takeaway: Higher number of active users drives price down

# Conclusion

- Ad delivery algorithms (unintentionally?) favor some political actors
- Within-country price variation:
  - Average 4% (max. 27%)
  - Significant exposure bias leads to thousands of differential reach
- Key drivers:
  - Audience size
  - Spending history
  - Ideology (?)
  - Supranational parties (?)
- Calls for regulatory attention to preserve an equal playing field:
- Algorithmic access for researchers to audit independently

# Thank You for Listening!
